

Granted awards from the Lion Tamarins of Brazil Fund 2002-2009, mainly based on the contributions from the EAZA Rainforest Campaign 2001-02.

Project title	Country	Amount in €
2002:		
Population Status of the Black-faced Lion Tamarin (<i>Leontopithecus caissara</i>): Conservation and Management	Brazil	4.200
Research related to conservation of Golden-headed Lion Tamarins (<i>Leontopithecus chrysomelas</i> ; GHLTs) in and near Una Biological Reserve, Bahia Brazil (Monitoring of Study Groups, Habitat use, Current and Future Collaborations)	Brazil	4.200
2003:		
Evaluating Population Viability and Genetic Diversity in wild Golden-headed Lion Tamarins using Geographic Information Systems (GIS)	Brazil	4.200
2004:		
Black-faced Lion Tamarin Conservation Programme: Preliminary Studies on the Mainland Subpopulation focusing on Future Translocations	Brazil	4.200
The Black Lion Tamarin (<i>Leontopithecus chrysopygus</i>) as an umbrella species in the conservation of the biodiversity of patches of the Atlantic Rain Forest of the São Paulo's inland area	Brazil	4.200
2005:		
Ecology and Behaviour of Golden-headed Lion Tamarin (<i>Leontopithecus chrysomelas</i>) in a Mesophytic Forest in Southern Bahia, Brazil	Brazil	4.200
The Black Lion Tamarin (<i>Leontopithecus chrysopygus</i>) as an umbrella species in the conservation of the biodiversity of patches of the Atlantic Rain Forest of the São Paulo's inland area (continued from 2004)	Brazil	4.200

Black-faced Lion Tamarin Conservation Programme: Preliminary Studies on the Mainland Subpopulation focusing on Future Translocations (continued from 2004)	Brazil	4.200
2006:		
Building a New Black Lion Tamarin (<i>Leontopithecus crysophygus</i>) Population: A Practical Metapopulation Management Model	Brazil	4.200
Effects of Forest Fragmentation and Disturbance on the Demography, Ecology and Behaviour of Golden-headed Lion Tamarins (<i>Leontopithecus chrysomelas</i>) in the Una Biological Reserve, South-Bahia, Brazil	Brazil	4.200
Survey and Genetic Analyses of specific Golden Lion Tamarin Populations	Brazil	17.000
Establishment of a Golden-headed Lion Tamarin (GHLT) Consortium with four major goals: <ul style="list-style-type: none"> • Elaborate field studies of the entire GHLT metapopulation with focus on identifying critical areas for the collection of genetic material • Support basic infrastructure of GHLT monitoring projects in order to facilitate new research, students, and larger collaborative studies spanning multiple study sites • Improve communication among individuals and organizations involved with and working towards GHLT conservation • Prepare for a GHLT Conservation Action Plan Workshop 	Brazil	17.000
Implementing action plans for two endangered species of Brazilian primates – black lion tamarin and black-faced lion tamarin –through a shared model	Brazil	34.000
2007:		
Building a New Black Lion Tamarin (<i>Leontopithecus crysophygus</i>) Population: A Practical Metapopulation Management Model	Brazil	4.200
Black-faced Lion Tamarin Conservation Programme: Implementing the Conservation Action Plan through filling Data Gaps	Brazil	17.200

Bridging gaps: forest corridors for the metapopulation management of black lion tamarins (<i>Leontopithecus chrysopygus</i>).	Brazil	17.000
Survey of a new population of Black-faced Lion Tamarins in order to generate support for the integrated management of the Sebuí PNHP and Superagüi National Park as it relates to the management and conservation of <i>Leontopithecus caissara</i> .	Brazil	4.200
Establishment of a Golden-headed Lion Tamarin (GHLT) Consortium with four major goals (part 2): <ul style="list-style-type: none"> • Elaborate field studies of the entire GHLT metapopulation with focus on identifying critical areas for the collection of genetic material • Support basic infrastructure of GHLT monitoring projects in order to facilitate new research, students, and larger collaborative studies spanning multiple study sites • Improve communication among individuals and organizations involved with and working towards GHLT conservation • Prepare for a GHLT Conservation Action Plan Workshop 	Brazil	17.000
Emergency funding for Golden Lion Tamarin Conservation Programme to continue monitoring of the Poço das Antas subpopulation for six months, and to resume a minimal level of monitoring in União as a response to a sudden withdrawal of financial support from other sources. This was considered an “emergency request” because one year without detailed monitoring in PDA would have resulted in irretrievable loss of continuity in the demographic and genealogical databases that form the basis for in situ scientific management of all four species of lion tamarins	Brazil	17.000
2008:		
Ecology, behavior and conservation of Black-faced Lion Tamarin (<i>L. caissara</i>) in the Superagüi Island”	Brazil	4.200
Monitoring of Black Lion Tamarins population at the Black Lion Tamarin Ecological Station	Brazil	4.200

Forestry Corridors for the Golden Lion Tamarin (Leontopithecus rosalia): Paths of the Atlantic Forest, Rio de Janeiro – Brazil	Brazil	4.200
Black-faced Lion Tamarin Conservation Programme: Implementing the Conservation Action Plan through filling Data Gaps	Brazil	17.000
Black Lion Tamarin Conservation Programme: Implementing the Conservation Action Plan through filling Data Gaps	Brazil	17.000
Genetic Structure of Golden-headed Lion Tamarin Populations in Southern Bahia (Brazil)	Brazil	17.000
Implementation of selected Action Steps in AMLD's Metapopulation Management Plan for Golden Lion Tamarins	Brazil	17.200

In addition to this ~13.000€ has been granted to monitoring of Golden Lion Tamarins, Black Lion Tamarins and Black-faced Lion Tamarins annually based on “Adopt a Group” arrangements made during the Rainforest Campaign.
